Please select your course & name from the list. Contact Instructional Services if your course or name are incorrect or missing.	CAS 206 - Gruner
1. Report the data gathered via the assignments, tests, etc. identified in question 3 of your Part A, and analyze student achievement for the course outcomes you selected. (Note that student evaluation results and comparisons are reported in question 2 below.)	<p>Students achieved 98.5% on the weekly assignments.</p> <p>Students achieved 94.7% on the final course project.</p>
Outcome #1	Use knowledge of HTML scripting and text editor to create personal and/or business websites following current professional standards and industry best practices.
% of Students who successfully achieved the outcome:	100%
Outcome #2	Use critical thinking skills to design and create websites.
% of Students who successfully achieved the outcome:	100%
Outcome #3	Apply internal cascading styles to control the appearance of a website.
% of Students who successfully achieved the outcome:	100%

<p>2. Reflect on your assessment results and provide analysis, considering what contributes to student success and/or lack of success. Include feedback from student course evaluations as appropriate.</p>	<p>The above results represent an accurate assessment of the students' success. The assignments and project were graded according to a rubric and the students all completed the requirements. Student feedback confirms that the students understood the requirements and had the skills and information needed to complete them.</p> <p>What the results do not show are that some students did not complete the assignments in a timely manner; these students dropped the class so their results are not shown. Student preparation is a large component of student success, and it is important to ensure that future students have adequate skills to accomplish the outcomes required for the class.</p>
<p>3. Based on your analysis in the questions above, what course adjustments are warranted (curricular, pedagogical, etc)?</p>	<p>The addition of CAS 133 as a prerequisite for CAS 206 will help to ensure that future students are adequately prepared to complete CAS 206.</p>
<p>4. What resources would be required to implement your recommended course adjustments (materials, training, equipment, etc.)? What budget implications result?</p>	<p>None are required. The change has already been made.</p>
<p>5. Were your assessment methods accurate indicators of student learning? Why or why not? Any additional comments?</p>	<p>The next time this course is assessed, it will be helpful to include the quiz results as one of the criteria for measurement. That is a purely objective measurement which would provide another perspective on student success. For the students who completed this term, the quiz average was 85.7%.</p>
