Notes: When comparing the data for the outcomes 1 – 5 – it was apparent that the data was much more accurate to the questions being asked. The rating was based on the list below for psychomotor skills and affective skills. However, as I state further in this report – some of the individual measurement questions could be worded differently to reflect all types of specialties.

Psychomotor Skills: 5 - The student was able to do the task proficiently and without supervision but the scales below 5 were graded as follows: 4 – Student was proficient but needed some supervision; 3 – Knowledgeable about the task but was always supervised; 2 – Had observed the task but not performed it and 1 – The task was performed in the office but the student had not observed the task nor perform it. And NA was used when the task was not used in the office.

Affective Skills: 5 – The preceptor saw the student always applying the principle; 4 – Preceptor saw the student mostly applying the principle with some lapses; 3 – Preceptor saw the student show awareness of the principle but did not apply the principle consistently; 2 – Preceptor explained the principle to the student but did not see application of the principle and 1 – The preceptor notices the student not performing the principle consistently; And NA when the preceptor did not observe the student applying the principle at all.
